# EXCALIBUR - DEGASIFICATION SYSTEM

Quality through innovation

## Degasification System

Remove unwanted gases from your well water supply such as methane, radon, hydrogen sulfide, and carbon dioxide with a Degasification System from Excalibur Water Systems. This system utilizes aeration to naturally remove gas and odor from your water. Ensure the water in your home is free from contaminants with a system that is backed by a 5 year unlimited warranty.

Chemical free system

Low cost operation

Twist top for easy access

Pressure tank included

Removes unpleasant gases/odors from your water

Durable, polyethylene construction

*\*well water supplies only*

Part #	Description	Dimensions W x H (in)
A30VOD	115 Volt Degasification System	32" x 70"
A50VOD	120 Volt Degasification System	32" x 70"

## Gas In Well Water

Naturally occurring gas such as methane is commonly found in well water supplies, along with other gases including hydrogen sulfide, radon, and carbon dioxide. Methane is colorless, odorless, and highly flammable. While it does not present any health risks, it can become an explosive hazard under the right conditions and can give your water a milky and/or fizzy appearance. These issues can be solved with a Degasification System, which uses aeration to separate the gas from water.

## How Are These Contaminants Removed?

Well water enters the Degasification System from the well pump and is sprayed through aeration nozzles. As the water is turned into a fine mist, it falls to the bottom of the tank. Gas and odor rise to the top of the system, where it is then vented outside with a jet blower.

## Choose Excalibur

Choose a system you and your family can depend on to remove gases from your well water supply with a Degasification System from Excalibur Water Systems.

***Note: This unit will need to be vented outside with PVC pipe.***
